
a
Raw nested Gram: $\kappa \propto D^{2H+2}$
$1/\varepsilon$ (double)
condition number of A_D
$H = 0.55$
$H = 0.75$
$H = 0.95$
dimension D
b
Predicted orders to $D = 32\,769$
relative error $e_D/\|f\|_H$
indicator
$t^{-1/4}$
$|t - \frac{1}{2}|$
e^t
dimension D
c
Polynomial directions raise the rate
indicator: no gain
e^t: cosines only, $\propto D^{-1-H}$
6×10^7
e^t: enriched, $\propto D^{-3-H}$
relative error ($H = 0.75$)
dimension
