
a
$w = 1/t$ (no closed form)
MC at the $H = 0.95$ width:
$\approx 10^{11}$ s (sampling only)
interval width for $L_w(1)$
wall time [s]
bracket
MC, 95% CI
b
$w = 1$
MC at the $H = 0.95$ width:
$\approx 10^{12}$ s (sampling only)
interval width for $L_w(1)$
wall time [s]
$H = 0.55$
$H = 0.75$
$H = 0.95$
c
Weighted spectrum, $w = 1/t$
faint: $J = 256$
full: $J = 1024$
$\mu_n \,/\, c_H(n\pi/\kappa_w)^{-1-2H}$
eigenvalue index $n$
$H = 0.55$
$H = 0.75$
$H = 0.95$
